

TF6100 Toolbox Key

The Terra Firma Toolbox key is suitable for use with all Terra Firma Classic range pit lids. All Terra Firma pit keys are designed and tested to reduce muscle stress when in use. Reduced muscle stress results in reduced risk of back and neck injury for workers. The Terra Firma Classic range lock engages when the key is removed, the toolbox pit key can't be removed if the lid isn't locked first.

TF6110 Telstra Key

The Keys are already in your toolbox! Terra Firma Telstra pit key suitable for use with all Endurotek range Terra Firma access covers. Also suitable for Telstra and NBN covers including P2, P3 and P5 pit covers. 63 cm long and manufactured from high quality materials – won't bend like cheap imitation products.

TF6120 Ergonomic Lifter

Terra Firma Ergonomic key lifter suitable for use with all Terra Firma Classic range Class pit lids. Opens all Classic Range Terra Firma Pit Lids.

TFTACC-110 Lifting Aid

Terra Firma Lifting Aid pit key is suitable for use with all Terra Firma ThruBeam range pit lids.

TFTACC-100 Lifter with Seal Break

Terra Firma Seal Breaker key lifter suitable for use with all Terra Firma ThruBeam range pit lids. Opens all Terra Firma ThruBeam access covers with ease.

Litter Guards

Why should all councils use litter guards on stormwater drainage pits?

Urban areas across Australia contribute 20-40kg of gross pollutants to stormwater per hectare, per year. For large Australian cities, this equals 60,000 tonnes or 2 billion items of litter annually!

Councils across Australia work hard to stop litter from entering our waterways, but regular pit inspections, maintenance and cleaning can be costly. With environmental concerns becoming a bigger focus, many councils are wondering how they can improve their drainage systems without increasing costs?

That's why Terra Firma developed adjustable, long-life stainless steel gutter guards for use with our lightweight, composite pit lids. Designed to prevent litter from entering our waterways, this leading product:

- Prevents up to 80% of litter which would otherwise be destined for waterways;
- Minimises the frequency of inspections and cleaning required;
- Minimises the cost of maintenance as inspections become faster; and
- Expands to fit a variety of size openings, making installation a breeze
