

FRP Cable Trays & Ladders

Terra Firma has developed an extensive range of FRP cable trays & cable ladders. Our cable trays are lightweight and made to withstand tough conditions. Excellent chemical, corrosive and fire resistance; high thermal and electrical insulation and transparency to radio waves offer significant advantages over metal products

Ideal for Hostile Environments

Our cable trays are ideal for oil rigs, electric plants, offshore installations, industrial complexes, oil refineries and chemical plants.

High Strength

FRP has a high strength to weight ratio, which means that despite its light weight it is incredibly strong. It can be used to carry heavy cables and can easily stay upright like steel trays.

Light, strong and stable

FRP trays are lightweight and easy-to-install making them ideal for overhead installations. They are easy to handle which means reduced installation costs.

Customisation

We offer customisation on special requests. We can design and make cable trays according to specifications. Our trays can be designed to meet any requirement, from sizing, installation to design requirement.

FRP Cable Trays & Ladders

We have a wide range of Cable Trays, including:

- Ladder Type Cable Trays
- Perforated Cable Trays
- Channel Cable Trays

Features (Extra Accessories)

- 90 Degree Horizontal Bend
- 45 Degree Horizontal Bend
- Striaight Reducer
- Equal Cross
- 45 Degree Vertical Bend
- 90 Degree Tee
- 90 Degree Vertical Bend

Advantages

- Corrosion Free/ Resistant
- Chemical Resistant
- Strong - high load bearing capacity
- Light weight, easy to install
- Electrically insulating/ non-conductive
- Complete system
- Fire Resistance
- Versatile
- UV Stable
- Radio Transparent
- High thermal insulation
- Durable
